

**1. Is the Python Standard Library included with PyInputPlus?**

No, We need to install it separately.

**2. Why is PyInputPlus commonly imported with import pyinputplus as pypi?**

It is used as an alias, Just like pd is used for pandas.

**3. How do you distinguish between inputInt() and inputFloat()?**

inputInt() = It only accepts integers.

inputFloat() = It accepts float numbers.

**4. Using PyInputPlus, how do you ensure that the user enters a whole number between 0 and 99?**

```
num = pyip.inputInt("Enter age: ", min=0, max=99)
```

**5. What is transferred to the keyword arguments allowRegexes and blockRegexes?**

We can use allowRegexes and blockRegexes to allow a certain text to be accepted or rejected. Following are the two examples:

```
response = pyip.inputNum(allowRegexes=[r'(I|V|X|L|C|D|M)+',  
r'zero']) # it allows roman letters as numbers too
```

```
response = pyip.inputNum(blockRegexes=[r'[02468]$']) # blocks  
the even numbers
```

**6. If a blank input is entered three times, what does inputStr(limit=3) do?**

It will throw RetryLimitException exception.

**7. If blank input is entered three times, what does inputStr(limit=3, default='hello') do?**

It will return "hello" instead of throwing an exception
